

Think Tetris

Value Mechanics

Value Storytelling

Design Space is typically more memorable than narratives for games w/ low narrative focus
Maps, not stories, put in magazines

Games fit older tradition of spatial stories
odysseys, epics, travel narratives
Games allow for max immersion in storytelling

Butch Norton

Many games DO have narrative aspirations
tap into emotional residue

Experiences of games can never JUST be story-mechanics always remembered

Games tell stories DIFFERENTLY from other media
Games are a unique medium

Ex: Hades - Evokes mythology

Pre-existing narrative assumptions

Evocative

4 E's

Draw upon other stories more so than tell self-contained story

Exist in dialogue, w/ not isolation from source material.

Re-write stories by redefining spaces
McBee's Alice

Essential Background

Agreement points

There is not "one future" of games, nor narration with

Not prescriptive

Introduce spatiality; designers are less storytellers and more narrative architects

learn from comparisons w/ other media

Spatial Stories/ Environmental Storytelling

Spatial stories evoke pre-existing associations

Immersion can be shattered by a single contradictory element.

Spatial stories often rely on player reaching a final destination

Environmental storytelling

Infer story in physical space

Game Design as Narrative Architecture

Player experience & story is not pre-structured or pre-programmed

Ex: Animal Crossing, Minecraft, Sandboxes

4 E's Emergent

sim items

Self-design lets players build to own significance
create own story
freedom of story, limitation on this freedom to narrative story functions

Mystery, story via context clues
Ex: A Short Hike, Stray, Inscryption, walking sims

Plot: events, story: viewer mental chronological construction of events

4 E's

lets players build to own significance

create own story

Mystery, story via context clues

Ex: A Short Hike, Stray, Inscryption, walking sims

Embedded

Information spread across numerous channels
BUT Games do this

Players use stage details and their changes to make guesses about narrative.

Life is Strange, Until Dawn, Butterfly Effect Games

open-ended exploratory narratives must give hints in multiple locations, assume one can't explore them all.

Enacting

enter a game in 2 ways

broadly defined goals
micro-narratives

Loose sequencing privileges spatial exploration over plot development

"Impact Moments"

4 E's

Accordion

Story charted as often follows an accordion structure

Ex: Zelda: BOTW, most RPGs

Player acts through story events

evoked material need not be fully explained
target audience
Star Wars Game
